Education

University of Michigan-Flint Flint, MI
Bachelor of Innovation and Technology in Software Engineering, *Expected May 2027*
Minor in Psychology
GPA 3.61

- Relevant Coursework: Data Structures, Algorithm Analysis, Object-Oriented Programming, Software Engineering, Human-Computer Interaction, Computer Ethics
- Current Coursework: Software Architecture and Design, Game Development

Projects

Future Me Mobile Application | *Kotlin, Android Studio, GitHub*

- Developed a Kotlin mobile application that helped visualize users' procrastination habits through a structured to-do list interface.
- Implemented an intuitive navigation menu, interactive user interfaces, and a local database using Room to support application calculations and task tracking.
- Developed an analytics dashboard with visual graphs generated from stored task data, along with search, filtering, editing, and custom task-tagging functionality.
- Partnered with another student throughout a semester, using GitHub for version control and coordinated development.
- Created and executed over 100 test cases throughout development to validate application functionality.

Cross-University Student Connection Mobile Application | *Figma*

- Designed a Figma prototype for a mobile application intended to connect students attending different universities.
- Conducted early prototype testing with four users and used survey feedback to refine initial requirements, user flows, and interface design.

Software Engineering Project

- Collaborated with an external industry partner to gather and document software requirements while working under a non-disclosure agreement.
- Applied Agile practices to organize project planning, requirements analysis, and system design activities.
- Created UML diagrams, domain models, and use cases to document system structure, behavior, and requirements.
- Developed formal requirements and testing documentation to establish traceability between requested functionality and validation activities.
- Analyzed proposed software changes and documented an implementation approach before the project concluded prior to the coding phase.

Bluetooth remote-controlled car | Arduino, C++

- Collaborated with a four-person team to design and build a Bluetooth-controlled remote-control car using Arduino and C++.
- Programmed wireless commands to control the car's movement and direction and troubleshoot hardware/software integration issues.

Experience

Crew Trainer February 2021 - Present
Dave's Hot Chicken *Howell, MI*

- Selected for a Crew Trainer role and train new employees on company procedures, customer service standards, and food safety practices.
- Coordinate training schedules and onboarding requirements to ensure new employees complete training within established timelines.
- Collaborate with team members and shift leads to maintain efficient workflows and achieve daily operational goals.
- Maintain accurate cash and digital transactions while providing efficient service during high-volume periods.

Technical Skills

Languages: Java, C++, Kotlin
Development Tools: Android Studio, Room, Visual Studio Code, Git, GitHub, Docker, Arduino, Figma
Engineering Practices: Agile, Requirements analysis, UML, Domain modeling, Use cases, Technical documentation
Currently Learning: Unreal Engine
